PROFESSIONAL SUMMARY

Experienced Software Engineer with 2+ years designing scalable online applications utilizing React, TypeScript, and C#.I enjoy writing clear, maintainable code for products that are often used.I have built AI-powered systems, including a RAG chatbot utilizing NLP approaches. I am capable of managing the entire development process, including design, implementation, deployment, and production support.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, C#, Python

Frontend Development: React.js, Angular, HTML5, CSS3, Responsive Design, Accessibility (a11y), Material UI

Backend Development: ASP.NET Core, REST API, GraphQL, EF Core, NodeJS, Webhooks

AI and Search: RAG, Natural Language Processing (NLP), Semantic Search, Elasticsearch, MCP, Agentic AI

Databases: MS SQL Server, MongoDB

Messaging and Caching: Kafka, Redis

DevOps and Cloud Practices: Azure DevOps (CI/CD), Docker, Telemetry, Application Monitoring

Engineering Fundamentals: Data Structures and Algorithms, Object-Oriented Programming (OOP), SOLID Principles, Secure Coding

PROFESSIONAL EXPERIENCE

Software Engineer

May 2025 – Present

TransPerfect, Chennai, India

- Developed scalable REST APIs with ASP.NET Core, NodeJS and MongoDB.
- Built frontend features using React and TypeScript, focusing on reusable components and clean state management.
- Added Elasticsearch-based search tools to increase data retrieval efficiency.
- Used Redis caching and Kafka messaging to boost system responsiveness and dependability.
- Integrated structured logging, telemetry, and application monitoring for live site diagnostics and incident resolution.
- Used SOLID concepts and object-oriented design to ensure a clean architecture and secure coding standards.
- Contributed to Azure DevOps CI/CD pipelines and Docker-based containerized services.
- Contributed to software development, including design, implementation, deployment, and production support.

Full Stack Engineer

Jan 2024 – May 2025

Codingmart Technologies, Coimbatore, India

- Created full-stack applications using React, TypeScript, ASP.NET Core, and RESTful APIs.
- Ensured responsive layouts, accessibility (a11y) compliance, and optimized rendering performance.
- Improved React's state management and component structure to reduce needless re-renders.
- Developed reusable UI components with Material UI to ensure uniformity throughout the program.
- Created relational database schemas in MS SQL Server and suggested database optimizations
- Used data structures and algorithmic thinking to improve the backend processing logic.
- Participated in Agile Scrum procedures, including sprint planning, code reviews, and continuous integration workflows.

PROJECT

RAG-Based AI Chatbot with NLP

- Developed and built a Retrieval-Augmented Generation (RAG) pipeline to extract contextual data from large document repositories.
- Used Natural Language Processing (NLP) techniques for intent understanding and semantic query matching.
- Implemented vector-based semantic search to improve response relevance.
- Developed backend services in Python using clean architecture and SOLID concepts.
- Added concurrent request processing and caching methods to enhance response time.
- Designed and developed a responsive chat interface using React and TypeScript, handling real-time query input, streaming responses, and dynamic UI updates.

EDUCATION

Bachelor of Computer Science and Engineering

2020 – 2024

Sri Krishna College of Technology, Coimbatore, India
